

ABSTRACT

An indication structure for paper reserves adapted for auto document feed apparatus includes a housing, a feed module, a printer module, a support element, an elasticity element, a light source, a shield element and a transparent element; wherein, the shield element is arranged on a radiation path of the light source, to shield the part of light, the transparent element is mounted in an opening of the housing, for providing the light radiated out. Whereby, using the simple structure to improve higher manufactured cost, processes and longer time of fabrication.
